Second Year AIML Engineering (SEM-IV A.Y. 2025-26)

Web Programming Lab. Experiment Report

Experiment 1: Apply styling to a personal portfolio webpage using CSS, including colors, fonts, spacing, and layout properties.

---

1. AIM

To apply styling to a personal portfolio webpage using **Cascading Style Sheets (CSS)** by implementing **colors, fonts, spacing, and layout properties** to improve visual appearance and usability.

---

2. LAB OBJECTIVE

- To understand the role of CSS in web page styling
- To apply colors and fonts for better visual design
- To use spacing properties such as margin and padding
- To apply layout-related CSS properties for proper alignment
- To enhance the readability and structure of a personal portfolio webpage

---

3. LAB OUTCOME

After completing this experiment, the student will be able to:

- Apply CSS styles to HTML elements
- Use CSS properties for colors and typography
- Implement spacing using margin and padding
- Organize page content using layout properties
- Improve the overall design and user experience of a webpage

---

4. PREREQUISITE

- Basic knowledge of **HTML tags and structure**
- A personal portfolio webpage created using HTML
- Understanding of file linking between HTML and CSS

---

5. THEORY

5.1 Cascading Style Sheets (CSS)

CSS is used to define the **presentation layer** of a webpage. It separates content from design, allowing easier maintenance and better control over layout and appearance.

5.2 Colors in CSS

Colors improve visual appeal and readability.
Common properties:

- color
- background-color
- border-color

5.3 Fonts and Typography

Fonts enhance readability and user experience.
Common properties:

- font-family
- font-size
- font-weight
- text-align

5.4 Spacing in CSS

Spacing controls the distance between elements.

- margin → space outside an element
- padding → space inside an element

5.5 Layout Properties

Layout properties control how elements are arranged on a webpage.
Common properties:

- display
- width
- height
- text-align

6. PROCEDURE

1. Open the personal portfolio HTML file.
2. Create a new CSS file and link it to the HTML document.
3. Apply background and text colors using CSS.
4. Set fonts and text alignment for headings and paragraphs.
5. Apply margin and padding to control spacing.
6. Use layout properties to align sections properly.
7. Save the files and refresh the browser to view changes.

---

7. RESULTS / OUTCOME EXPECTED

- Portfolio webpage displays styled content
- Proper use of colors and fonts
- Improved spacing and readability
- Well-aligned and organized page layout
- Enhanced visual appearance of the webpage

---

8. CONCLUSION (Student-Answerable Questions)

Students should answer the following based on this experiment:

1. How did CSS improve the appearance of the portfolio webpage?
2. Why are fonts and colors important in web design?
3. How do margin and padding affect webpage layout?
4. Which CSS property helped in aligning content properly?
5. What advantage does using external CSS provide?

---

9. POST-EXPERIMENT QUESTIONS

1. What is the difference between inline, internal, and external CSS?
2. What is the purpose of the `font-family` property?
3. Difference between margin and padding?
4. Why should design and content be separated?
5. How does CSS enhance user experience?
