- HTML
- CSS
- JavaScript
- Flexbox
- Grid

HTML

HTML (HyperText Markup Language) is the standard markup language for creating web pages. It describes the structure of a web page using elements.

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Page</title>
  </head>
  <body>
    <h1>Hello World</h1>
```

```
  </body>
</html>
```

CSS

CSS (Cascading Style Sheets) is used to style and layout web pages. It controls colors, fonts, spacing, and positioning of elements.

```
body {
  font-family: Arial, sans-serif;
  background-color: #f0f0f0;
  color: #333;
}
```

JavaScript

JavaScript is a programming language that enables interactive web pages. It can manipulate the DOM, handle events, and communicate with servers.

```
document.getElementById("demo")
  .addEventListener("click", function() {
    alert("Hello!");
  });
```

Flexbox

Flexbox is a one-dimensional layout method for arranging items in rows or columns. Items flex to fill additional space or shrink to fit.

```
.container {
  display: flex;
  justify-content: center;
  align-items: center;
  gap: 10px;
}
```

Grid

CSS Grid Layout is a two-dimensional layout system. It lets you lay content out in rows and columns, making complex layouts straightforward.

```
.container {
  display: grid;
  grid-template-columns: 1fr 1fr 1fr;
  gap: 20px;
}
```

Recitation 4: Newspaper Layout

The Daily Times

March 11, 2026 | Mumbai Edition

Breaking: New Technology Revolutionizes Web Development

In a groundbreaking announcement today, leading tech companies unveiled a new framework that promises to simplify web development significantly. The technology combines the best aspects of current frameworks while reducing

Local Community Launches Green Initiative

The Mumbai city council has approved a comprehensive green energy plan that aims to reduce carbon emissions by 40% over the next decade. The initiative includes solar panel installations on public buildings and the expansion of electric vehicle charging infrastructure across the metropolitan area.

complexity. Industry experts predict this could change how millions of developers build applications. Early adopters report a 50% increase in productivity.
